Introduction

The Problem

Parameterized Complexity

Parameterized Hardness

With Unbounded Precedence Delays

With Bounded Precedence Delays

Dynamic Programming Approach

Without Precedence Delays

With Precedence Delays

Conclusion

n jobs to schedule on m machines $M_1, \dots, M_m$.

Introduction

The Problem

Parameterized Complexity

Parameterized Hardness

With Unbounded Precedence Delays

With Bounded Precedence Delays

Dynamic Programming Approach

Without Precedence Delays

With Precedence Delays

Conclusion

M_1

$\vdots$

M_m

Time windows $[r_j, d_j)$.

Introduction

The Problem

Parameterized Complexity

Parameterized Hardness

With Unbounded Precedence Delays

With Bounded Precedence Delays

Dynamic Programming Approach

Without Precedence Delays

With Precedence Delays

Conclusion

[Lenstra et al. '77] 1-machine with $[r_j, d_j)$:
strongly NP-complete.

Introduction

Delays

With Bounded Precedence
Delays

Dynamic Programming Approach

Without Precedence Delays

With Precedence Delays

Conclusion

- Problem $\mathcal{P}$, instance $\mathcal{I}$.
 - Problem $(\mathcal{P}, k)$, instance $\mathcal{I}$, parameter $k : \mathcal{P} \rightarrow \mathbb{N}_0$.
- P: deterministic time $\text{poly}(|\mathcal{I}|)$.
 - FPT: deterministic time $f(k(\mathcal{I})) \cdot \text{poly}(|\mathcal{I}|)$.
- NP: nondeterministic time $\text{poly}(|\mathcal{I}|)$.
 - para-NP: nondeterministic time $f(k(\mathcal{I})) \cdot \text{poly}(|\mathcal{I}|)$.

Introduction

The Problem

Parameterized Complexity

Parameterized Hardness

With Unbounded Precedence Delays

With Bounded Precedence Delays

Dynamic Programming Approach

Without Precedence Delays

With Precedence Delays

Conclusion

- Problem $\mathcal{P}$, instance $\mathcal{I}$.
 - Problem $(\mathcal{P}, k)$, instance $\mathcal{I}$, parameter $k : \mathcal{P} \rightarrow \mathbb{N}_0$.
- P: deterministic time $\text{poly}(|\mathcal{I}|)$.
 - FPT: deterministic time $f(k(\mathcal{I})) \cdot \text{poly}(|\mathcal{I}|)$.
- NP: nondeterministic time $\text{poly}(|\mathcal{I}|)$.
 - para-NP: nondeterministic time $f(k(\mathcal{I})) \cdot \text{poly}(|\mathcal{I}|)$.

Fact [Flum, Grohe '06]

$(\mathcal{P}, k)$ is para-NP-hard if and only if $\mathcal{P}$ is NP-hard for some fixed value k_0 of parameter k .

Precedence delay types

Introduction

The Problem

Parameterized Complexity

Parameterized Hardness

With Unbounded Precedence
Delays

With Bounded Precedence
Delays

Dynamic Programming Approach

Without Precedence Delays

With Precedence Delays

Conclusion

- Three precedence delay types studied: exact, minimum and maximum.

Precedence delay types

Introduction

The Problem

Parameterized Complexity

Parameterized Hardness

With Unbounded Precedence Delays

With Bounded Precedence Delays

Dynamic Programming Approach

Without Precedence Delays

With Precedence Delays

Conclusion

- Three precedence delay types studied: exact, minimum and maximum.
- If τ is a feasible schedule and $(i \xrightarrow{\ell_{i,j}} j)$:

- Exact delay:

- Minimum delay:

- Maximum delay:
